E-MU & User-tested Internal IDE Drives

- EOS v4.01 for E4 Ultra now supports an internal IDE drive; it needs to be ATA-3 (or higher) compliant or else it will not be mounted.
- The IDE drive needs to be configured as the Master device. Currently, EOS only supports one internal IDE drive configured as the Master device; it ignores a Slave device.
- Currently, EOS does not support ATAPI devices (IDE CD-ROM drives, IDE Zip drives, etc.).
- NOTE:** Only E4 Ultra samplers allow the use of IDE drives. EIII, Emax II, EIIIx, and ESI family samplers can only communicate with SCSI devices.
